

# Enterprise Cost System

## Enterprise Web Client

The ImpactECS Enterprise Web Client (EWC) is a browser based version of the Enterprise Desktop Client application that allows remote access to the Enterprise Server from the internet or corporate intranet. EWC is developed using AJAX technologies, so its appearance is similar to the desktop client. Additionally, security is a critical concern with any web-based application. ImpactECS' security profile protects data stored on the Enterprise Server through one of two authentication options.

Category	Feature	 Enterprise Web Client	 Enterprise Desktop Client
<b>Navigation</b>	Hierarchical tree view navigation	✓	✓
